EXPELLER

Expellers are used for final pressure of oil from oilcake, which is obtained after having been pressed in a forepress. SUNRISE manufactures expellers that have the productivity of 200-600 kg/hour. The expellers we produce are made as a single-screw press having a vertical split-face loose pressing cage. The press is driven by a three-phase current motor through a cylindrical or planetary drive. The distributor already prepresses the raw material in the vertical input hole. It contributes to the complete optimal filling of a pressing cage. The feed screw provides the even regulated supply of raw materials into the press. The rapidly wearing parts of a horizontal press duct are armored. The screw shaft rests upon one or two points on the bed plate of a press.

Characteristics	Unit measure	Oil press model		
		MPZEh-200 (мпзэ-200)	MPZEh-400 (мпзэ-400)	MPZEh-600 (мпзэ-600)
Productivity	kg/ hour	100-200	200-400	400-800
Power	kilowatt	7.5-11	11-15	15
