ROASTER

SUNRISE manufactures 3- to 5-vat roasters.

The heating area of the roasters is 5.2 m² to 14,5 m².

Damp-heat treatment of oil-bearing raw materials before oil pressure we manufacture roasters. We use thermal oil, steam or electric power to heat roasters. When having damp-heat treatment the cleaned raw material (мятка) changes its physical-mechanical properties; the surface forces, which keep oil in the raw material, decrease. It increases output of oil during further processing.
